Abstract (en)

[origin: EP0552771A1] The invention relates to a method and an apparatus for embossing and printing textile materials. In the method according to the invention, printing ink is applied, according to a design to be printed, onto a printing-ink carrier (6) having a stretchable foil material, the printing-ink carrier is arranged between a material to be embossed and printed, comprising a textile material, and a pressure-stamp element (7) provided with an embossing pattern, and the printing-ink pattern corresponding to the applied printing ink is oriented in a desired position relative to the embossing pattern. The material (5) comprising a textile material and the printing-ink carrier are then pressed together by the pressure-stamp element, with the textile material simultaneously being embossed and printed. In this method according to the invention, multi-coloured designs can be printed onto a textile material by embossing in one operation. <IMAGE>
