Abstract (en)  
[origin: EP0553466A1] A shower panel comprises at least one pivoting leaf (2) which is mounted pivotably relative to a profiled rail (6) and a compensating device which is connected to the profiled rail (6) which is arranged so as to be vertically displaceable relative to a guide profile (8). It is proposed that the guide profile (8) has a partition (40) and a rear, open cavity (26) in which the compensating device is arranged. Said compensating device comprises, in particular, a gas spring (40) and acts on a connecting body (34) which is connected to the profiled rail (6) and protrudes into the rear cavity (26). <IMAGE>
