Abstract (en)

[origin: EP0553660A2] Paper handkerchief packages usually have a cover made of thin plastic film and can be reclosed after the first opening, optionally by using an attached adhesive strip. The invention is intended to provide a package which has the most environmentally friendly cover possible, is easy to handle and can be reclosed many times if possible. A closure flap (30) covering a removal opening (40) in the region of a front wall (13) of the package (11) is connected, according to the invention, to a part region of edges of the removal opening such that it can be torn off (remaining connection 32) to open the package. Furthermore, the invention relates to a blank for forming the package and to a corresponding method. <IMAGE>
