Abstract (en)
[origin: EP0553666A1] A vertically adjustable support (10) which is intended for shutterings in the building industry and is preferably manufactured from aluminium is composed of an outer pipe (12) on which a threaded nut is fastened in a captive fashion, and of an inner pipe (11) which has threaded portions (13, 14) on the outer surface. The segments (13, 13', 13" and 13''') project into cutouts (19, 19', 19", 19''') of the outer pipe (12). This configuration results in a robust support (10), the inner pipe (11) of which is mounted and guided in the outer pipe (12) such that it is fixed in terms of rotation. By means of the thread (14) according to the invention, the inner pipe (11) can be produced in a simpler manner and, at the same time, material can be saved in the production of the support (10). <IMAGE>
