Abstract (en)

[origin: EP0553834A1] In an arrangement for fastening a heatable plate (2), in particular a cooking surface, to an adjoining construction (1), in particular the work top of a piece of kitchen furniture, the holding frame (3) is designed as a profiled part made of elastically deformable material and the sealing means (3, 11, 12) bear, being elastically deformed, against the plate edge (6). The fastening is effected without adhesively bonding the plate to the holding frame and can be detached if necessary. To apply and maintain the pre-tension in the elastically deformable holding frame, a sealing frame is provided, which overlaps the edges of the heatable plate and of the adjoining construction and clamps the plate edge (6) in from two or three sides. <IMAGE>
