Abstract (en)  
A door handle or the like, comprising a stiff body member (2) and a separate additional member (3) designed to be installed upon the body member (2) so as to form together with it a composite handle unit (1), said additional member (3) being of a somewhat elastic material and corresponding substantially to the length of the body member (2). The additional member (3) and the body member (2) are preferably formed to be arcuate over at least part of the longitudinal direction of the handle and are provided with attachment members to be mutually fitted together so that the attachment members of the additional member (3) comprise protrusions (5a, 5b) located at its opposite ends and extending transversely with respect to the handle, said protrusions (5a, 5b) being arranged to engage with depressions (9a, 9b) arranged to the ends of the body member (2), respectively, so that for installation of the additional member (3) it is pulled over the ends of the body member (2) to be tightly but preferably removably secured to the body (2). <IMAGE>
