Abstract (en)

Method of encyphering messages transmitted between interconnected networks (2, 8) via highways (6) using a specified network protocol, especially and for example the Internet protocol (IP), a device for communicating encyphered data between at least two items of equipment (3, 9) belonging to two different networks interconnected via highways using the specified network protocol, and an encyphering apparatus implementing the said method. The method is characterised in that the messages are encyphered whilst preserving in clear the "header" part of the message, allowing it to be conveyed via the highways. <IMAGE>

Abstract (fr)

Il s'agit d'un procédé de chiffrement de messages transmis entre réseaux interconnectés (2,8) via des passerelles (6) utilisant un protocole réseau déterminé, notamment et par exemple le protocole Internet (IP) , d'un dispositif de communication de données chiffrées entre au moins deux équipements (3,9) appartenant à deux réseaux différents interconnectés via des passerelles utilisant le protocole réseau déterminé, et d'un appareil de chiffrement mettant en oeuvre ledit procédé. Le procédé est caractérisé en ce que on chiffre les messages en conservant en clair la partie "en-tête" du message permettant son acheminement via les passerelles. <IMAGE>
