Abstract (en)
[origin: EP0554238A1] In a device for connecting rails (3), which are fixed on a supporting framework (1), in particular the supporting framework of a bridge, to rails which lead further on the foundation or the land (2), using an expansion device (8) for taking up movements in the longitudinal direction of the rails, in which there is arranged between the supporting framework (1) and the foundation or land (2) a support (4) which is displaceable in the longitudinal direction of the rails and which is coupled to the supporting framework (1) in the displacement direction (22), and in which the expansion device (8) is connected on the side of the displaceable support (4) which faces away from the supporting framework (1), the supporting framework (1) is connected non-positively, in particular welded or screwed, to the displaceable support (4), a flexible connecting member (5) being interposed. <IMAGE>
