Abstract (en)

[origin: WO9208293A1] A carry case assembly (100) capable of supplying electrical energy to a portable electrical device (110) is disclosed. The carry case assembly (100) includes a first set of contacts (102) which are electrically connected to battery (202) which is also part of the carry case assembly (100). When a portable electrical device (110) such as a radio is placed in the carry case (100), contacts on the radio mate with the contacts (102) on the carry case. Once the contacts have mated, an electrical connection is formed, and electrical energy flows from the battery (202) to the radio.
