Abstract (en)
[origin: EP0554556A1] The invention relates to a film case made from two film layers (10) of substantially rectangular outline, resting flatly against each other. The film case is closed at three lateral edges (12, 14, 28) by fold, weld or adhesion lines or seams and is open at one lateral edge (30) to form an insertion aperture for documents. Furthermore, an edge strip (14) of defined width (b) is arranged at a lateral edge (18) perpendicular to the open lateral edge (30). In order to facilitate the introduction of documents into the film case, the inner weld seam (16) of the edge strip (14) follows a course, in the vicinity of its insertion end (22), which widens the interior of the case towards the insertion aperture in a funnel-like manner, and is at an acute oblique angle relative to the outer edge (18). <IMAGE>
