Abstract (en)

[origin: EP0555631A1] The invention relates to a method of making gearing parts with outwardly facing teeth from a round metal blank or an initial draw, a border being provided on the round metal blank or the initial draw having a border adjoining which, in the case of the initial draw, is an axially extending annular surface. The required outwardly facing teeth are then produced in the respective border by infeed of a toothed roller. <IMAGE>
