Abstract (en)

[origin: JPH05337156A] PURPOSE: To provide an incubator constituted so as to eliminate costly multiple adjustment for each individual parameter when considering the functional relation of parameters optimizing the heat balance in the case of adjusting the parameters determining the atmosphere in a stay room of new and premature born babies. CONSTITUTION: A logical connection generator 14 is connected to a control circuit 11, one of the first or the second signal is supplied as a guide value, a following value is generated based on a functional relation 15 and the guide value, and the following value becomes the target value of the second movement parameter 8.
