Abstract (en)

[origin: EP0555688A1] The fluorescent lamp has an elongated housing, which accommodates electrical operating components within itself, supports on the outside holder caps for a fluorescent lamp and is sealed at both end faces by an end cap (4) which in each case have a cutout (5) for accessing an electrical connector (6) which is arranged in the housing and has the form of a plug part or socket part (20), it being the case that for the purpose of lining up fluorescent lamps the connectors can be pushed partially out of the housing through the cutout (5) of the end caps (4) and be fixed in position in both positions. An adjusting part (8) made from plastic is fixed on the connector (6), and the end cap (4) has a slide guide (9) which extends into the housing (1) and in which the connector (6) and/or the adjusting part (8) is displaceably mounted and the adjusting part (8) with the connector (6) can be displaced by means of a screw, running in the sliding direction, or manually and can be locked in both displaced positions by the screw and/or by locating means (11). <IMAGE>
