Abstract (en)
[origin: EP0555738A1] A table or covering board consists of a core board, e.g. made of wooden material, with a possibly coated covering side and a peripheral edge guard (5) made of a plastic profile which covers the cut surfaces of the core board (1) and overlaps its upper side (2) and underside (3). The edge guard consists of two angle profiles which are injection-moulded as a closed frame and an outer frame (6) of which covers the cut surfaces with a long limb and projects beyond the underside of the core board and overlaps the upper-side covering layer with its other limb, whereas the other, inner frame (7) rests with its one limb on the inside of the long limb of the outer frame against its region projecting beyond the underside and rests on the underside of the core board with its other limb, the frames being connected to one another on their limbs which rest against one another.
