Abstract (en)

Operating device with self-adjustable extension particularly for discharge valves of water cisterns for sanitary services housed inside a void (2) in a wall (3) with a frontal aperture (4), comprising a flat supporting frame (6) fixable to the partition (3) at the position of the said quadrangular aperture (4) and supporting an operating lever (8) of substantially triangular shape, oscillating eccentrically about a horizontal axis (7) of the said frame in such a way as to have two vertices (9, 10) external to the frame and in contact with a control push button (13) pivoted eccentrically on the said operating lever (8), and an opposite vertex (11) which is free to slide and is guided by corresponding means (17, 19) on a horizontal arm (18a) of a member substantially of inverted L-shape whose other vertical arm (18b) has at its end a coupling (20) with which are associated connecting means (21) capable of engaging with the upper end of a vertical tube (5) carrying the discharge valve of the cistern (1). <IMAGE>
