Abstract (en)
[origin: EP0555929A1] To overcome the problems involved in angularly connecting together (at 45 DEG) converging section elements (12, 13) of the frame (2) of a door or window (3), the joint (1) according to the invention comprises a central element (4) provided with two perpendicular contact surfaces (5, 6) for the cross-sections (10, 11) of the incident section elements (12, 13) and perpendicular male portions (7, 8) arranged to penetrate into and be securely retained within the cavity of the incident section elements (12, 13). <IMAGE>
