Abstract (en)  
[origin: WO9208658A1] Described is a package system for free-running materials, which is designed to reduce significantly the cost and complexity of the packaging process, at the same time improving the handling and dosing characteristics of such packages. This is achieved by means of a rigid container (1) with a closable lid (3) and by means of a flexible sachet (2) filled to tantness with extrudate powder and/or granular material, the shape of the outside of the sachet matching the shape of the inside of the container.
