Abstract (en)
[origin: WO9304616A1] A device is disclosed for holding publicity supports (4) lighted from behind and made of a poster-like blank. Each publicity support (4) is composed of an envelope (11) made of a translucent foil open on one side that receives a poster-like blank. The rear side of each envelope (11) of the publicity support (4) can be engaged by toothed belts guided over toothed wheels (58). On the side walls (78) of the housing (2) are arranged guiding rails (56), on the side of the visible surface, in which the envelopes (11) to be brought to the viewing pane (55) are guided. At the lateral edges of the front side of each envelope is arranged at least one interlocking hook (67) at one end section (14) of the envelope (11), in the advance direction. The interlocking hooks (67) releasably engage the other end section (15) of the preceding or subsequent envelope (11) in the advance direction.
