Abstract (en)

A device for the releasable attachment of a cleaning implement, such as a brush (3), between two jaws (11, 21) or the like which can be moved towards one another. In this case, the two jaws (11, 21) or the like, which are connected to one another so that they can spring apart elastically, are penetrated by a bolt (6) constructed with a pivoting arm (5), in which case they can be clamped with the cleaning implement (3) in a first position of the pivoting arm (5), whereas they spring apart in a second position of the pivoting arm (5), as a result of which the cleaning implement (6) can be released from said jaws or inserted between them. <IMAGE>
