Abstract (en)

[origin: EP0556627A2] The invention relates to a circuit for a reversible image structure of an area matrix of a printing forme of a printer, an electrical circuit being assigned to each zone of the area matrix, which zone can be activated or cleared by repeated actuation. There is provision for each circuit (21) to have at least one threshold value switch (23, first threshold value switch) which changes its switching state by selective actuation and, as a result, activates or clears the associated zone (3). <IMAGE>
