Abstract (en)
[origin: EP0556710A2] A luminaire has a possibly movable reflector (26) accommodated in a lamp housing (11), and a holder (32) receiving the lamp (35), as well as a switch (37) which can be operated from outside the lamp housing (11), the cap and the switch (37) being mounted on a printed-circuit board (36) inserted into the lamp housing (11). The electrical connections between the switch (37) and the lamp (35) as well as to supply terminals on the lamp housing (11) are produced by printed conductors located on the printed-circuit board. The lamp housing has on its side situated opposite the emission side an opening which can be sealed by a cover (13) and through which the printed-circuit board (36) can be pushed into the interior of the lamp housing (11). <IMAGE>
