Abstract (en)
A dish-washing machine is described comprising a cabinet and a washing chamber, said cabinet having a base and an upper part; the main characteristic of the described dish-washing machine is that a substantial part of the washing chamber of the machine is realised in plastic material in a single piece together with said base (1;1') and/or with said upper part (22;22') of the cabinet. In particular said base (1;1') of the cabinet in plastic material is realised in a single piece together with at least two support stanchions (2a,2b; 2a' ,2b',43) and together with the bottom (30;30') of the washing chamber. In one advantageous version of the invention, the upper part of the cabinet is also composed by an enbloc (22') in plastic material comprising two side walls (23'), a rear wall (44) and an upper wall (27'), a surface of said walls realising the skirt and the top of said washing chamber and the other surface of said walls realising the exterior of the cabinet of the machine. To at least one substantial part of the visible surface of the parts in plastic (23', 27, 44, 30') that realise the washing chamber may be given a metallic appearance, with which the user of machine is familiar. <IMAGE>
