Abstract (en)

A method for processing a silver halide photographic material comprising a support and at least one hydrophilic colloidal layer comprising at least one light-sensitive silver halide emulsion layer, wherein said silver halide photographic material is exposed and is processed with a developer containing a compound represented by general formula (I) by means of an automatic developing machine with a development tank having an opening ratio of 0.05 or less: <CHEM> wherein R1 and R2 each represents a hydrogen atom, an alkyl group, an aryl group, an aralkyl group, a hydroxyl group, -SM, -COOM, -SO3M, -PO(OM)2 (wherein M represents a hydrogen atom, an alkali metal atom, or an ammonium group), an amino group, a nitro group, a cyano group, a halogen atom, an alkoxy carbonyl group, an aryloxy carbonyl group, a carbamoyl group, a sulfamoyl group, an aryloxy group, or an alkoxy group, with the proviso that R1 and R2 may be connected to each other to form a cyclic group.
