Abstract (en)

[origin: EP0557180A1] A motor vehicle headlight comprises a casing, defining with a glass, an inner space protecting a light source, and at least one device for ventilating the said inner space, provided in combination with the casing. The ventilation device comprises a first part (110) projecting out of the casing, which ends in a first plug (130) and defines a first channel (C1) and a second channel (C3) which are connected together by a bend, and a second part (120) projecting into the casing, which ends in a second plug (140) and defines a third channel (C2) and a fourth channel (C4) connected together by a bend. The first and third channels are connected together. The second and fourth channels emerge respectively downwards to the atmosphere and upwards to the said inner space. <IMAGE>
