Abstract (en)

[origin: EP0557206A1] The present invention relates to a system for step-by-step control of an electromechanical programmer for a domestic electrical appliance and more especially of a programmer with smooth preselection including just a single micro-motor. A programmer 1 according to the invention for a domestic electrical appliance includes at least one micro-motor 8 driving a cam unit 5 and includes a lever 2 held on a profile 4 of the cam unit 5 by an elastic means 3, which turns on and turns off the supply to the micro-motor 8 by its motion relative to the cam unit 5, thus automatically ensuring the final phase of stepping of the cam unit 5. The present invention applies to all types of programmer equipping domestic electrical appliances. <IMAGE>
