Abstract (en)
[origin: WO9208777A1] A light-duty liquid or gel dishwashing detergent composition containing an alkyl ethoxy carboxylate surfactant mixture and calcium or magnesium ions. The compositions containing magnesium ions require a magnesium chelating agent, and a buffering agent to maintain the pH of the composition from about 8 to 10. Compositions containing calcium ions may require a calcium chelating agent, particularly at pH levels above 9, to prevent the formation of CaCO₃ precipitates during storage. The compositions exhibit good grease removal while manifesting mildness to the skin. The compositions also have good storage stability. A preferred type of dishwashing detergent composition is in the liquid form. High pH and calcium or magnesium ions of the compositions increase grease removal properties while maintaining mildness.
