Abstract (en)
[origin: EP0557662A1] Container device for portable objects, intended to be placed in a dispensing device. The container device comprises: - a first shell (52) of elongate shape having first edges in which a pile of portable objects can be stacked longitudinally, - a second shell (54) having second edges matching the first edges, - assembly means (72, 74) suitable for assembling, in a way which cannot be dismantled without breaking, of the first edges of the first shell (52) and of the second edges of the second shell (54), the said assembly defining, at one of the ends of the container device, a transverse outlet slot (75) for the portable objects, and - means (85) forming a breakable tell-tale and suitable for normally obstructing the said slot (75). <IMAGE>
