Abstract (en)

To maintain a constant degree of wetting of a sheet-like material in a pad-mangle trough (chassis) despite the sinking liquor level, the transport speed of the sheet-like material through the trough is controlled as a function of the liquor level in the trough.

Abstract (de)

Um das Maß der Netzung einer Stoffbahn in einem Foulard-Trog trotz absinkenden Flottenniveaus konstant zu halten, wird die Transportgeschwindigkeit der Stoffbahn durch den Trog in Abhängigkeit von der Höhe des Flottenniveaus im Trog gesteuert.
