Abstract (en)

[origin: DE4122214A1] Sheet or sets of sheets are turned very rapidly and reliably, especially after the cutting of endless stationery, conveyed further in a different transport direction and separated in that the leading edge of the sheet is taken to a diagonal bending slot via which a corner of a sheet first reaches an outlet slot in which the leading edge of the sheet is taken in a direction perpendicular to the feed direction in a plane lying parallel to the transport plane but at a certain distance therefrom.
