Abstract (en)
[origin: EP0559960A1] A shaped charge (3) has a liner (6a), which is constructed open on both sides, in its charge cavity (4). The cavity (4), which is lined in such a way, is closed (7, 10), until the charge is initiated, both in the region of the lining base (6b) and in the lining region (6c) remote from the base, and is completely filled with a medium (11) which can flow. The closure (7) in the lining region (6c) remote from the base is used, in the event of initiation by displacement at the correct time of medium (11) which can flow out of the cavity centre, to create a space for the shaped-charge jet to form in from medium (11) which can flow but is not displaced.
