Abstract (en)  
[origin: EP0560063A1] The invention relates to a low-pressure discharge lamp. The electrodes each consist of an electrode helix (2) which is provided with an electron emitter (4) and is arranged axially in a metal cylinder (1), the metal cylinder (1) being closed at one end. The metal cylinder (1) and the electrode helix (2) have a common power supply (3), which is also used for retention of these two lamp parts. <IMAGE>
