Abstract (en)

[origin: EP0560216A1] A description is given of an arrangement for adjusting the focal point of a luminous source (4) in a housing (1), the luminous source (4) being arranged on a mounting plate (2) which is adjusted for the purposes of focusing. In order to provide an adjusting arrangement in conjunction with low production costs and to provide an easily accessible possibility of adjusting the luminous source (4), it is provided that the mounting plate (2) for the luminous source (4) is assigned a lifting drive (9) which assigns an adjusting movement to the mounting plate (2) in the direction of emission of the reflector (5). <IMAGE>
