Abstract (en)
[origin: GB2265328A] A wet razor head comprises a plastics body (1) having a cover (20) and a front guardbar (18) which define a surface for engaging the skin of the user, and a razor blades (2) disposed in said plastics body (1), wherein, a series of strands (11) extend over and perpendicular to the cutting edges such that at least one of the cutting edges protrudes beyond the tangent plane formed by the skin engaging surfaces on the front guardbar (18) and rear cover (20) by at least 0.02 mm. Ranges for the tangent lengths and shaving angles in relation to the strands (11) which produce the ideal shaving geometry are specified. <IMAGE>
