Abstract (en)  
The invention relates to an adapter provided with a housing, which is intended for being connected to a mounting rail, which is provided with conductor rails extending in the longitudinal direction of the mounting rail, with which contact tongues of the adapter co-operate. The contact tongues are provided on the ends of strip-shaped contact arms, which extend in the longitudinal direction of the housing. The strip-shaped contact arms can be pivoted transversely to their longitudinal direction by means of a setting means, which is rotatably journaled in the housing. The ends of the strip-shaped contact arms remote from the contact tongues are connected to strip-shaped connecting arms, which extend transversely to the contact arms and which, with their ends remote from the contact arms, are connected to the housing of the adapter. <IMAGE>
