Abstract (en)
[origin: EP0560648A1] The invention relates to a connector of the rectangular type having a shell (casing) (2) in which an insulating central body (1) having electrical contact elements (16) is positioned. A beam element (41) is arranged at each of the longitudinal ends (17) of the central insulating body (1) and a stud (50) is arranged on an internal transverse face (22) of the shell (2). The beam elements include a central portion (41) whose ends are each extended by a resilient arm (42, 43) so as to improve the flexibility of the beam (41). <IMAGE>
