Abstract (en)
[origin: EP0560748A1] The invention relates to a retaining means having at least one resilient, in particular band-shaped, plate-shaped or web-shaped portion (7). Sheet-like material (4) laid on the floor (3), e.g. parquet panels, boards, laminated floor panels or the like, are pressed at a distance from a wall (2) or are held at a distance from said wall or are pressed against one another by means of said portion (7). The invention provides that the resilient portion (7) is carried by an in particular flat, panel-shaped or web-shaped backpart (1) which can rest on the wall (2) and carries at least one clamping part (8) for securing or latching onto a finishing strip (14) which is, in particular, in contact with the wall (2) and/or the surface of the sheet-like material (4). <IMAGE>
