Abstract (en)
[origin: EP0561004A1] The key is intended for a lock, in which lamellar tumblers (4) are arranged movably. A cutout (42) for the engagement of a key bit (82) is provided in each tumbler (4). An incision (87) is provided on the key bit (82) for each tumbler. Each incision (87) is one of a plurality arranged offset in the longitudinal direction of the key (8) and at a varying distance from the longitudinal axis of the key. The incision bottom (86), which, in the region of the mid-plane of the key bit, is at the distance from the longitudinal axis of the key matched to the associated tumbler (4), is inclined relative to the sidewalls (88) of the key bit (82). <IMAGE>
