Abstract (en)

[origin: EP0561116A1] The invention relates to a fastening device (B) for a ridge batten, having nail feet (13) which originate from a ridge-batten bearing plate (14) and are intended for driving into head ends (2) of rafters (1). In order to achieve a design which is simple to manufacture and is optimised in terms of use, the invention proposes that the ridge-batten bearing plate (14) has upwardly directed spurs (16) for penetrating into a ridge batten (10). As a result, the conventional fastening means directed towards the ridge batten (10) or the like can be dispensed with. <IMAGE>
