Abstract (en)
[origin: EP0561136A1] An adjusting device for a height-adjustable table serves for producing or inhibiting a vertical relative movement between a fixed frame part (4) at the floor end and a movable frame part (6) at the table understructure end, which part is guided movably relative to said fixed frame part, the adjusting device (2) being attached to the fixed frame part (4) and engaging on the movable frame part (6). The fixed frame part (4) and the movable frame part (6) are hollow profiles which bear against one another with little play and the adjusting device (2) is arranged releasably in a hollow space (16) between wall sections (18, 20, 22, 24) of the fixed frame part (4) and of the movable frame part (6). <IMAGE>
