Abstract (en)

[origin: EP0561200A2] The construction kit has an upright base element (B1) for receiving a bearing of a winding shaft, the base element having, at least on its lateral and on its upper end side (18,22), toothing profiles (20) for attaching at least one add-on element (E1) having a corresponding counter-profile (36). This makes it possible to erect bearing blocks of very different requirements using a relatively small number of structural parts. <IMAGE>
