Abstract (en)

[origin: EP0561291A1] In the case of a device for making ready-to-use plastering mortar (screed), comprising devices for the metered removal of the components from a supply container and for introducing the metered-removed components into a mixing device, and also a pump arranged downstream of this mixing device for building up the delivery pressure for the finished fluid plastering mortar, to achieve optimum removal and metering at the same time as a compact design of the device and a simple design of the supply container it is envisaged that the metering device (10) comprises at least one vertical shaft (12), on which the mixing tools (23, 24) are arranged, the mixing chamber (9) of the mixing device (10) having at least one horizontal separating wall (21) with at least one passage opening (22), the pump (27) being designed as a worm screw pump or eccentric worm screw pump or the like and being arranged directly below the mixing device (10), and the shaft (19) of the pump (27) lying in extension of a shaft (12) of the mixing device (10). <IMAGE>
