Abstract (en)

[origin: EP0561433A1] Process for dedusting exhaust gases with critical fluctuations of CO content is described, wherein the exhaust gas (1) is passed through an electrostatic precipitator (2), which is operated up to a CO content A of the exhaust gas (1) of at most 9% by volume and is switched off when the CO content A of the exhaust gas (1) is exceeded, and in which the exhaust gas (1) up to a CO content A of at most 9% by volume is fed to a stack (5) arranged downstream of the electrostatic precipitator (2), and in which the waste gas (1) is passed, when the CO content A is exceeded, through an additional hose filter (9) and then fed to the stack (5). <IMAGE>
