Abstract (en)
[origin: WO9211092A1] The present invention relates to a bottle (10) for holding a liquid sample during centrifugation in a centrifuge rotor (R) having a rotor cavity (H) that defines a predetermined angle of inclination beta with respect to the axis of rotation (AR). The bottle (10) comprises a body portion (12) having a neck portion (18) formed integrally therewith, an axis (20) through the neck defining a predetermined angle alpha with respect to an axis (16) of the body.
