Abstract (en)  
[origin: WO9308116A1] A loading crane that can be mounted on a lorry has a jib composed of several arms (11, 12, 13, 14) telescopically nested into each other. A hydraulic unit (16, 17, 18, 19) composed of piston and cylinder is arranged between successive arms. When an arm is extended, a stop arranged on the previous arm actuates a valve entrained with the extended arm, which opens the hydraulic supply for the arm that follows the extended arm. This valve is arranged at the closed end of the hydraulic cylinder of the arm that follows the extended arm.
