Abstract (en)

[origin: EP0562249A2] The invention relates to a fixing device for a door case in both a post-wall opening and a solid-wall opening. The door case has a U-shaped case profile which surrounds the jamb of the wall opening, is designed as a divided case profile and can be adjusted to the respective wall thickness. The fixing device itself is arranged between the jamb and the case profile and has on the one side a connection angle and on the other side an adjustable connection device for the case profile, which is designed as a T-shaped adjustment profile with a longitudinal web which can be displaced parallel to the jamb and a transverse web which can be displaced parallel to the wall. The displaceable case part assigned to the adjustment profile can be clamped onto the transverse web. <IMAGE>
