Abstract (en)

[origin: EP0562522A1] Watch (1), in particular wristwatch, having a watch casing (3), which has a mechanical watch movement and a dial, and a basic body (2) on which the watch casing (3) is mounted capable of rotating by 180 DEG about a first axis of rotation extending essentially parallel to the dial. The basic body is constructed as a frame (2) in the form of a U. A retaining element (9) is mounted on the limbs (4, 5) of the U-frame (2) such that it can pivot about a second axis (10) of rotation extending essentially perpendicular to the first axis (13) of rotation. The watch casing (3) is mounted on the retaining element (9) such that it can rotate by 180 DEG about the first axis (13) of rotation. <IMAGE>
