Abstract (en)  
[origin: EP0562943A1] The subject of the invention is a package intended for the preservation and then the mixing of two components and for the product obtained to be taken up. It consists of a shank (barrel) (1) with two external necks, and of opposing axial openings facing each other, one constituting a mouth carrying a pump (2), the other receiving a capsule (3) containing one of the components and possessing a cutting member (5) mounted in a fluidtight manner, the shank thus closed receiving the second component. This package forms a cartridge capable of being preserved upright both in its initial state and after first use and capable of ensuring asepsis. It can serve for preparing extemporaneous medicaments or other products having a limited shelf-life (preservation time). <IMAGE>
