Abstract (en)

[origin: EP0563015A1] The trolley comprises a first hollow element (8) of which the top face (8a) affords a downwardly angled profile (9) designed, once the fixture is erected, to interact with a cam (10) afforded by the topmost part (6a) of a second hollow element (6) such that the first can be shifted in relation to the second. The outer flank faces of the first element (8) also carry a pair of transversely projecting pins (12) insertable in two mutually opposed grooves (13) on the inner flank faces of the second element (6), which are open at the bottom ends and joined at the top ends with two further grooves (14) of profile similar to that of the cam (10); these additional grooves (14) combine with the pins (12) to restrain the second element (6) slidably, and to advantage, removably. <IMAGE>
