Abstract (en)
[origin: WO9211615A1] A selective call receiver (100) comprising a receiver (103), a controller (105), and means for presenting a recovered source document (113). The receiver (100) provides a received paging message that was generated from the facsimile message of the original source document, then the received paging message comprising at least one portion of the original source document and an address is interpreted and decoded by the controller. Using the means for presenting (113), the recovered source document can be exhibited in a format that substantially resembles the facsimile message of the original source document.
