Abstract (en)
[origin: EP0563426A1] The invention relates to a package container, consisting of at least two shaped items (1, 2) which bound the hollow space of the container and are formed from shreddings of recycled paper and/or cardboard by the suction method. According to the invention, the shaped items (1, 2) are constructed as hollow bodies whose interior (4) is closed off by a flat covering tray (6) of the same material, the flat, smooth side (3) of each shaped item (1, 2) and of the associated covering trays (6) forming the inner and outer surfaces of the container (I), and the rough surfaces (2') of the shaped items (1, 2) and of the covering trays (6) being directed into the interiors (4) of the shaped items. <IMAGE>
